 Wandfluh standard

DESCRIPTION

Direct operated, pressure compensated proportional flow regulating valve, cavity acc. to Wandfluh-Norm. Three flow ranges are available. The volume flow is adjusted by a proportional solenoid (VDE standard 0580). A progressive increase in volume flow and reduced hysteresis are characteristic of this valve. The cartridge body is made from steel. The outside parts and the solenoid are zinc coated.

FUNCTION

The 3-way flow control valve is designed to keep the oil flow to any actuator constant irrespective of the load. Surplus volume flow will be diverted to the tank line thus saving energy and preventing an overheating of the hydraulic system. The force controlled proportional solenoid running in the fluid acts directly on the control spool which opens the triangular shaped throttling notches in the cartridge body. The throttle opening, and therefore the flow volume changes proportionally to the current absorption of the proportional solenoid. When the solenoid is without current, the control spool is held in the closed position by a spring. To control the valve proportional amplifiers are available from Wandfluh (see register 1.13).

APPLICATION

Proportional flow control valves are suitable for precise feed control systems where the supply volume flow needs to be kept constant even when the load fluctuates. The slip-in cartridge is very suitable for mounting in control blocks and is built into the Wandfluh hydraulics NG 6 as a functional element in sandwich style plates and flange-mounted valves (please refer to the separate data sheets in register 2.6).
